

## PRE-PACKAGED **SPECIAL CUSTOM** ENCLOSURE INFORMATION

Special steel enclosure is sized to fit your needs for larger plumbing pumps and electrical panels. It is designed with side doors that can easily be removed for service access. The enclosure has an angle iron frame with 14-gauge steel panels, slanted roof, steel hardware, and steel support brackets.

Built in security locks are provided.

- The concrete pad size should be 4" thick and 3" apron all around base of enclosure.
- Electrical conduits need to be plumbed inside the concrete pad prior to installing the pad. It is critical that the pad is level. (If the pad is not level the doors may not come out easily).
- Allow 36" clearance in front of and behind the pad for easy access to the unit.
- Handling of the booster pump package requires a crane or forklift from underneath or slinging with straps for proper balancing. Gloves should be worn while handling enclosure to prevent injury from any rough or sharp edges.

For proper operation and handling, training will be provided.
